# Wirelessly Controlled Theater Light

This wireless DMX-512 lighting solution demonstrates the capabilities of CEL's MeshConnect™ Development Kit. The MeshConnect™ wireless DMX-512 system implements a wireless master module to control wireless slave modules. Additional wired slave devices can be connected to the wireless slave lights in a daisy chain demonstrating "true" DMX-512 compatibility. The wireless implementation greatly reduces equipment and installation costs (no expensive wires to pull), while adding convenience and flexibility for adding or removing additional lights.

**Part Number:** ZICM2410Px-KITx-1 >>

#### Features:

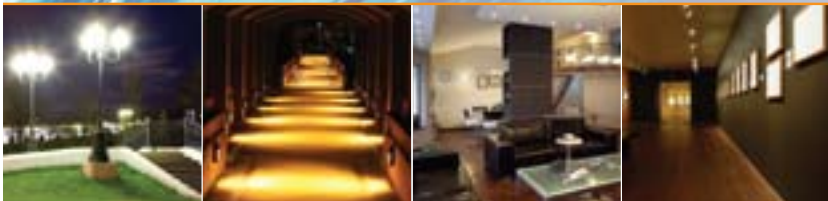

- Excellent RF performance (3000+/9,000+ feet range)
- DMX-512 software core
- 16 RF channels
- 22 inputs/outputs
- FCC, IC, CE certified
- 2.1V-3.3V input

#### Applications:

- Theater/stage lighting
- DJ/performance
- Street lighting
- Industrial/large commercial
- Remote ambient/motion sensing
